Pocket Appraise Express Handheld Vehicle Inspections

Express Vehicle Inspections with Digital Images

Aimed at Vehicle Inspection, Finance, Auction, and Delivery companies who have a requirement to inspect a large number of vehicles for accident or excessive wear and tear damage in order to restore vehicles to an agreed standard condition, or to bill for damage. The system provides unequivocal proof (removed subjectivity of inspections) of damage using digital images, meaning fewer rejections and queries of rectification charges.

Built upon the successful Pocket Appraise product, Pocket Appraise Express is designed for fast inspection of vehicles in an auction or POD environment. Speed enhancements include multi-select of factory fit options, input of high level vehicle data only, and fast specification of damage and parts utilising graphical "flat car" and pop-up menus. The entire inspection can then be transmitted to an office based PC instantly using a landline, mobile phone, or cradle.

The following inspection data can be captured and stored:

- Customer/collection location
- Damage and parts details
- Inspection Result
- High-level vehicle data
- Factory Fit options

Key Features

- **Inspection Job Management**— Receive notifications and details of new inspections booked from head office. Complete, send, view, and re-send jobs as required.
- **Integrated Device**— Single handheld device incorporating digital camera. Images are automatically "attached" to correct vehicle and damage so all data is kept together.
- **Calculates Damage Costs**— Using a pricing matrix you specify, damage & parts pricing is automatically calculated instantly.
- **Easy to Use**— Point and click colour touch screen means minimal training
- **Fast Data Entry**— Designed to minimise typing, utilising graphical vehicle to point and click for damage.
- **Preview of Colour Images**— Allows photos to be examined for quality before saving or re-taking
- **Robust & Efficient Communications**— Designed to allow inspections to be sent via landline, mobile phone, or docking cradle. Built in redundancy means completed inspection are never lost, and intelligent data transfer means call durations are kept to the minimum.

Business Benefits

- **Save Time**— Saves time and cost with no re-keying of data. Data can be quickly analysed. Data entry is smart, and kept to a minimum
- **Save Money**— Improved collection of rectification charges due to unequivocal proof
- **Share Data**— Share electronic inspection data easily with your business partners
- **Increased Professionalism**— Printed reports, sharing and recalling of inspections immediately, calculated pricing, and improved accuracy of data
- **Flexibility**— Easily modify pricing matrices or damage lists centrally and send them to all devices for consistency

The Unwired Advantage

- Unwired Solutions—a one stop shop
- Hardware reseller
- Wireless network installation experts
- Microsoft Mobility Partner
- Microsoft Pocket PC Launch Partner
- Rapid handheld application development
- Real-time back-office data to handheld devices
